## SUMMARY

---

Recent MCA graduate who turns messy, raw data into decisions across the full stack — analysis, engineering, and modeling. Writes **SQL** (CTEs, window functions) and **Python**, builds **Tableau and Power BI dashboards**, designs **statistical A/B tests**, and engineers **ETL pipelines** and **machine-learning models**. Comfortable from raw data to stakeholder-ready insight, with three hands-on data internships across e-commerce, retail, social media, and entertainment.

## TECHNICAL SKILLS

---

**Languages & Data:** Python (Pandas, NumPy, SQLAlchemy), SQL (MySQL, SQLite), Statsmodels, Scikit-learn  
**Analytics & Statistics:** A/B testing, hypothesis testing (Z-test), EDA, feature engineering, CLTV & churn, data-driven insights

**Machine Learning:** Classification, regression, model evaluation & tuning (GridSearchCV), precision/recall/F1, predictive modeling, TF-IDF

**Visualization & BI:** Tableau, Power BI, Matplotlib, Seaborn, dashboards, KPI reporting

**Data Engineering:** ETL pipeline design, data modeling (star schema), incremental loading, schema-drift handling, data validation/QA

**Tools:** Git, GitHub, Excel, VS Code

## EXPERIENCE

---

**Flexonixs Infosoft Pvt. Ltd.** — Data Engineer Intern

*Jun 2026 – Present | Remote*

- Built a Python and Playwright social-listening tool across Reddit, Instagram, and LinkedIn that scans posts and comment threads by configurable keywords and exports structured results — author, score, age, and direct permalink — to CSV, replacing manual monitoring.
- Engineered a resilient JavaScript-injected DOM scanner with whole-word regex and multi-keyword matching, plus score- and recency-based filtering, to cut irrelevant matches across three structurally different platforms.
- Wired the tool to an environment-variable configuration and a desktop control dashboard, enabling no-code operation for non-technical users.

**MBH Technologies Pvt. Ltd.** — Python Developer Intern

*Mar 2026 – May 2026 | On-site*

- Partnered with non-technical stakeholders to translate requirements into a Python desktop application that automated Excel data processing, cutting manual effort **~60%** and eliminating processing errors.
- Architected a scalable processing system integrating Excel handling, Selenium web scraping, and multithreading — **doubling execution throughput (2x)**.
- Scraped structured datasets from dynamic, paginated web sources using Selenium, and secured the app with SQLite + SHA-256 authentication.

**Unified Mentor** — Data Analysis Intern

*Oct 2025 – Jan 2026 | Remote*

- Delivered four end-to-end ML and analytics projects across e-commerce, social-media, consumer-hardware, and entertainment datasets — owning each pipeline from raw data through cleaning, feature engineering, modeling, and insight communication.
- Built a sales-prediction pipeline for 2,000 e-commerce furniture products, fusing **TF-IDF** features from product titles with numeric price signals into a 303-feature matrix and benchmarking six regression models.
- Analyzed **4,800+ TMDb movies** — parsing nested JSON genres, ranking by vote-count-weighted ratings, and tracing budget, revenue, and ROI trends.

## PROJECTS

---

**Automated ETL Pipeline for Global E-commerce Analytics** | Python (Pandas, SQLAlchemy), MySQL, PyMySQL, Git

- Engineered an **ETL pipeline** processing **51,000+ records** end to end, resolving character-encoding (ISO-8859-1) and international date-format conflicts that had corrupted prior loads.
- Cut processing time and database load **~40%** via **incremental loading**.

- Built a defensive transformation layer that absorbs **schema drift** (e.g., missing postal\_code) without failure, backed by structured logging and post-load **data-QA validation** checks.

#### Product Optimization A/B Test Analysis | *Python, SQLite, Statsmodels*

- Designed and measured an end-to-end **A/B test** on a checkout redesign, running a two-proportion **Z-test** that proved a **statistically significant 3.1% conversion lift (p = 0.0301)**.
- Modeled 2,000+ user events in SQLite and translated results into a recommendation projected to lift conversions **31% with zero added marketing spend**.

#### RetailInsights360 — End-to-End Retail Analytics | *Python, SQL, Tableau, Pandas*

- Designed a **star-schema data warehouse** powering customer analytics — Customer Lifetime Value (CLTV) and churn prediction.
- Built interactive **Tableau dashboards and reports** for KPI tracking across the retail funnel.

#### Instagram Fake-Account Detection | *Python, Scikit-learn, Pandas*

- Built and **evaluated a Random Forest classifier** on a balanced ~700-account dataset, reaching **94% accuracy with 0.94 precision, recall, and F1** on a held-out test set — beating a logistic-regression baseline (86%).
- Engineered a follower-to-following ratio feature that ranked among the top predictors alongside follower and post counts.

#### Global Layoffs Analysis | *MySQL, SQL*

- Wrote **SQL (CTEs, window functions)** to transform raw data into clean **reporting views**, ranking the top 5 companies by layoffs per year and surfacing cross-industry trends.

## EDUCATION

---

### Master of Computer Applications (MCA)

PP Savani University

Sep 2024 – Apr 2026

Surat, India

### Bachelor of Computer Applications (BCA)

Veer Narmad South Gujarat University

Jul 2021 – Feb 2024

Surat, India

## CERTIFICATIONS

---

**Google:** Data Analytics Professional Certificate; Advanced Data Analytics Certificate

**Microsoft:** Python Development; Data Analysis & Visualization with Python; Power BI for Beginners

**IBM:** Data Analysis Using Python

**Deloitte:** Data Analytics Virtual Job Simulation
